## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-45, drawn to a switch matrix assembly forming a variety of different button patterns, classified in class 200, subclass 5a.
  - II. Claims 46-69, drawn to a button assembly, classified in class 200, subclass 314.
  - III. Claims 70-84, drawn to a keypad assembly, classified in class 200, subclass 5a.
  - IV. Claims 85-93, drawn to an apparatus for backlighting an object, classified in class 200, subclass 314.
  - V. Claims 94-146, drawn to a switch matrix to which a plurality of keys of different sizes and shapes may be attached, classified in class 200, subclass 5a.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, III, IV and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions All of the groups are distinct from one another. Groups I and II provide different structures and different functions, though group does indicate the aspects of a lens and illumination, the specific structures

Art Unit: 2832

claimed in group II are not present in group I nor is group II directed to a switch matrix assembly but to the structure of a single button. Groups I and III are different and distinct because the first group is directed to a matrix assembly in which various configurations of buttons are possible and group III is a keypad assembly having an apparently different structure and defines only a keyboard which is not interchangeable. Groups II and III are different structures, one being the button assembly and the illumination thereof and the other being the control of the backlighting of any object and may only possibly be a button or key. Group IV is different from all of the above because the illumination is claimed as being provided by a completely different structure and the arrangement of keys while providing variability in appearance has completely different structural elements.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
